

There's a superior alternative to alleged "1 Million BTU" IDF heaters...

1 hour of operation at full RPM:

Input

7.25 gallons of diesel (1 million BTU)

Up to 40% fuel loss wasted out hot flues and generator

Output:
600,000 BTU's

And that's a *TD Inferno HD* from Therm Dynamics...

Input

4.9 gallons of diesel

Flameless technology is over 92% efficient

Output:
625,000 BTU's

24 Hours of runtime will save over **56** gallons!
